

# Chapter 1 Introduction to Computers, Programs, and Java

Hu Zheng

[huzheng@bupt.edu.cn](mailto:huzheng@bupt.edu.cn)

# HW submission requirement

Printed report

including

1) Name, studentid, class

2) Exercise No.

3) Source Code, procedures/results description and results demo such as pictures.

# Exercise 01

1.1 包的使用：示例**DroidApp**。拷贝./ch01/huz/目录，构建带子目录的文件夹，了解其包含的子目录结构，并尝试用命令行方式进行带包编译和带包执行，从而掌握目录、包、**classpath**等概念的关系。

1.2 2\*2线性方程组求解可以使用**Cramer**规则

$$\begin{array}{l} ax + by = e \\ cx + dy = f \end{array} \quad x = \frac{ed - bf}{ad - bc} \quad y = \frac{af - ec}{ad - bc}$$

编写程序，求解一下方程组并显示**x**和**y**的值。

$$3.4x + 50.2y = 44.5$$

$$2.1x + 0.55y = 5.9$$

**Submission Deadline: the Next Monday(10/15/2018  
9:00am(class03) or 11:10am(class04) )**

# Exercise 01

## 1.3 财务应用：计算未来投资值

编写程序，读取投资总额、年利率和年数，然后使用下面的公式来显示未来投资金额：

未来投资金额=投资总额× (1+月利率)<sup>年数×12</sup>

例如：如果输入的投资金额为1000，年利率为3.25%，年数为1，那么未来投资额为1032.98。

## 1.4 求出年数

编写程序，提示用户输入分钟数（例如十亿），然后显示这些分钟代表多少年和多少天。

为了简化问题，假设一年有365天。

## 1.5 选做题，完

善[https://github.com/huzhengatUCSD/Java\\_Course/blob/master/ch02/Calculator.java](https://github.com/huzhengatUCSD/Java_Course/blob/master/ch02/Calculator.java)的

未写好的方法，并试着编写一个

TestCalculator类，运用Calculator的方法完成对应运算功能。

//Submission Deadline: the Next Monday(10/16/2017  
9:00am(class03) or 11:10am(class04) )

# Programming Languages

Machine Language    Assembly Language    High-Level Language

1101101010011010

area = 5 \* 5 \* 3.1415;

# Popular High-Level Languages

Language	Description
Ada	Named for Ada Lovelace, who worked on mechanical general-purpose computers. The Ada language was developed for the Department of Defense and is used mainly in defense projects.
BASIC	Beginner's All-purpose Symbolic Instruction Code. It was designed to be learned and used easily by beginners.
C	Developed at Bell Laboratories. C combines the power of an assembly language with the ease of use and portability of a high-level language.
C++	C++ is an object-oriented language, based on C.
C#	Pronounced "C Sharp." It is a hybrid of Java and C++ and was developed by Microsoft.
COBOL	COmmon Business Oriented Language. Used for business applications.
FORTRAN	FORmula TRANslation. Popular for scientific and mathematical applications.
Java	Developed by Sun Microsystems, now part of Oracle. It is widely used for developing platform-independent Internet applications.
Pascal	Named for Blaise Pascal, who pioneered calculating machines in the seventeenth century. It is a simple, structured, general-purpose language primarily for teaching programming.
Python	A simple general-purpose scripting language good for writing short programs.
Visual Basic	Visual Basic was developed by Microsoft and it enables the programmers to rapidly develop graphical user interfaces.

# Interpreting/Compiling Source Code

A program written in a high-level language is called a *source program* or *source code*.

A source program must be translated into machine code for execution.

A Translation can be done using another programming tool called an *interpreter* or a *compiler*.

# Interpreting Source Code

An interpreter reads one statement from the source code, translates it to the machine code or virtual machine code, and then executes it right away.

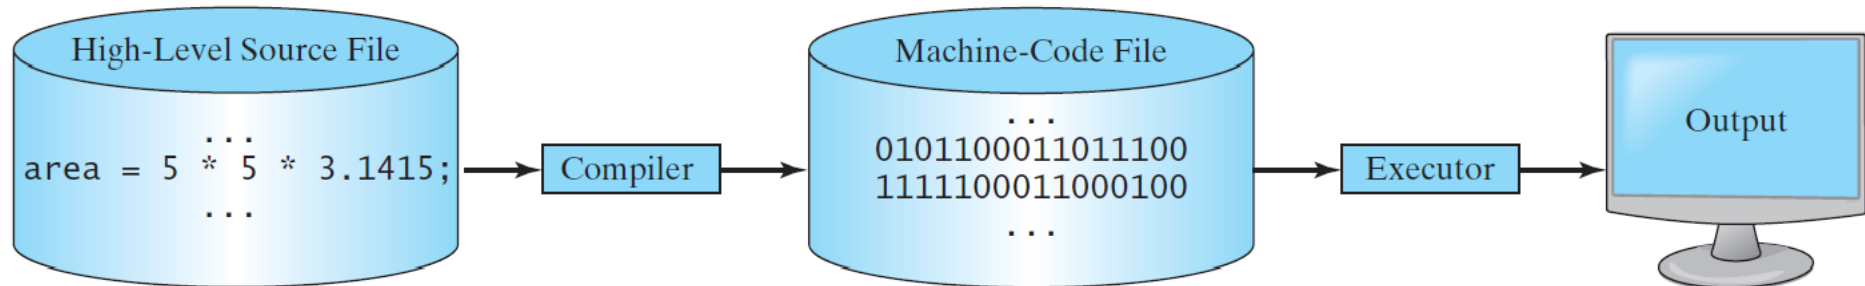

Note: a statement from the source code may be translated into several machine instructions.

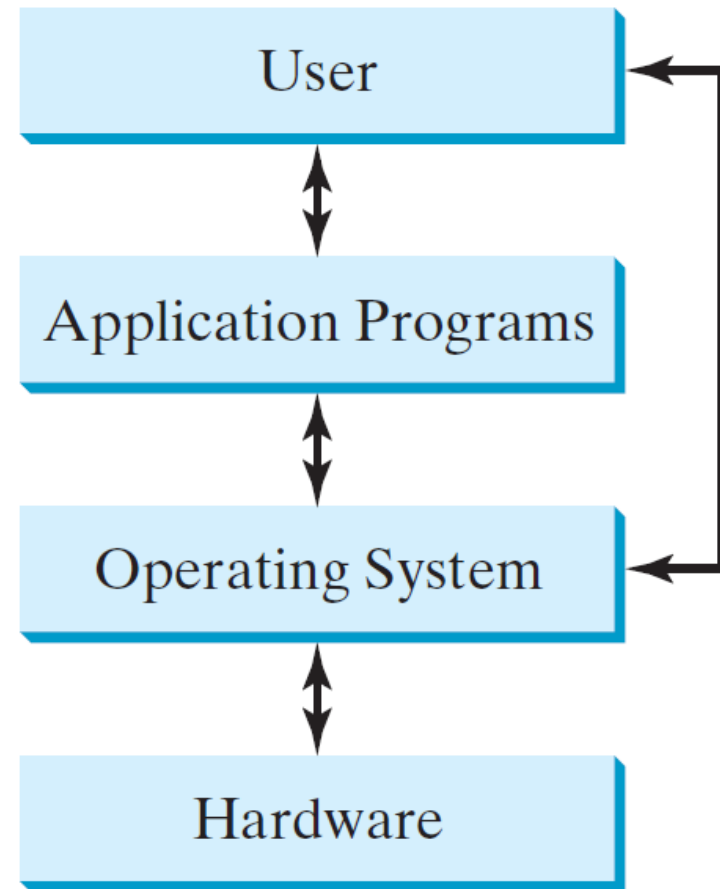

# Compiling Source Code

A compiler translates the entire source code into a machine-code file, and the machine-code file is then executed.

# Operating Systems

The *operating system* (OS) is a program that manages and controls a computer's activities.

# Why Java?

The future of computing is being profoundly influenced by the Internet

- ◆ Java is a general purpose programming language.
- ◆ Java is the Internet programming language.
- ◆ Whoops, there are new languages...

◆ however, blah blah blah

TIOBE 2018年9月编程语言1-10排行榜

## TIOBE Index for October 2018

October Headline: Swift is knocking at the door of the TIOBE index top 10

The top 9 of programming languages in the TIOBE index is quite stable now for some time, but the number 10 position is changing almost every month. This month Swift is trying to become a permanent member of the TIOBE index top 10. In the recent past Ruby and Perl were fighting for this position but they both seem to have had their best time. There seem to be 3 serious candidates for the top 10 position at the moment: Swift, Go and R, but even these are uncertain. Swift is clearly the number one programming language to develop mobile apps for iOS. But since it is only available for iOS and not for Android, you see developers move to "write once deploy everywhere" frameworks instead. Programming language R on the other hand is getting serious competition from Python nowadays. And for the Go programming language it is unclear what makes it stand out when compared to other programming languages. Let's see what is going to happen.

IMPORTANT NOTE. SQL has been added again to the TIOBE index since February 2018. The reason for this is that SQL appears to be Turing complete. As a consequence, there is no recent history for the language and thus it might seem that the SQL language is rising very fast. This is not the case.

The TIOBE Programming Community index is an indicator of the popularity of programming languages. The index is updated once a month. The ratings are based on the number of skilled engineers world-wide, courses and third party vendors. Popular search engines such as Google, Bing, Yahoo!, Wikipedia, Amazon, YouTube and Baidu are used to calculate the ratings. It is important to note that the TIOBE index is not about the *best* programming language or the language in which *most lines of code* have been written.

The index can be used to check whether your programming skills are still up to date or to make a strategic decision about what programming language should be adopted when starting to build a new software system. The definition of the TIOBE index can be found [here](#).

Oct 2018	Oct 2017	Change	Programming Language	Ratings	Change
1	1		Java	17.801%	+5.37%
2	2		C	15.376%	+7.00%
3	3		C++	7.593%	+2.59%
4	5	▲	Python	7.156%	+3.35%
5	8	▲	Visual Basic .NET	5.884%	+3.15%
6	4	▼	C#	3.485%	-0.37%
7	7		PHP	2.794%	+0.00%
8	6	▼	JavaScript	2.280%	-0.73%
9	-	▲	SQL	2.038%	+2.04%
10	16	▲	Swift	1.500%	-0.17%

# Java, Web, and Beyond

- ◆ Java can be used to develop standalone applications.
- ◆ Java can be used to develop applications running from a browser.
- ◆ Java can also be used to develop applications for hand-held devices.
- ◆ Java can be used to develop applications for Web servers.

# Characteristics of Java

- ♦ Java Is Simple
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ Java Is Secure
- ♦ Java Is Architecture-Neutral
- ♦ Java Is Portable
- ♦ Java Is Multithreaded
- ♦ Java Is Dynamic

# Characteristics of Java

- ♦ **Java Is Simple**
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ Java Is Secure
- ♦ Java Is Architecture-Independent
- ♦ Java Is Portable
- ♦ Java Is Multithreaded
- ♦ Java Is Dynamic

Java is partially modeled on C++, but greatly simplified and improved. Some people refer to Java as "C++--" because it is like C++ but with more functionality and fewer negative aspects.

## What does it mean

Java syntax and the Java API (application programming interface -- a library of Java code) is simple and designed to be easy to learn and use.

# Characteristics of Java

- ◆ Java Is Simple
- ◆ Java Is Object-Oriented
- ◆ Java Is Distributed
- ◆ Java Is Interpreted
- ◆ Java Is Robust
- ◆ Java Is Secure
- ◆ Java Is Architecture-Neutral
- ◆ Java Is Portable
- ◆ Java Is Multithreaded
- ◆ Java Is Dynamic

Java is inherently object-oriented. Java was designed from the start to be object-oriented. Object-oriented programming (OOP) is a popular programming approach that is replacing traditional procedural programming techniques.

One of the central issues in software development is how to reuse code. Object-oriented programming provides great flexibility, modularity, clarity, and reusability through encapsulation, inheritance, and polymorphism.

The idea behind objects is quite simple. Instead of designing a long and complex set of instructions or routines to perform one or more tasks, the programmer can break these into various parts. Each part can perform one or more discrete tasks and contains all the data needed to perform the task. This is an object. Java files define an object or a class of objects.

# Characteristics of Java

- ◆ Java Is Simple
- ◆ Java Is Object-Oriented
- ◆ Java Is Distributed
- ◆ Java Is Interpreted
- ◆ Java Is Robust
- ◆ Java Is Secure
- ◆ Java Is Architecture-Neutral
- ◆ Java Is Portable
- ◆ Java Is Multithre
- ◆ Java Is Dynamic

Distributed computing involves several computers working together on a network. Java is designed to make distributed computing easy. Since networking capability is inherently integrated into Java, writing network programs is like sending and receiving data to and from a file.

Java language provides a library of program routines to open and access objects across the Internet via URLs with the same ease as when accessing a local file system. You can send data across the net easily with Java programs.

# Characteristics of Java

- ◆ Java Is Simple
- ◆ Java Is Object-Oriented
- ◆ Java Is Distributed
- ◆ **Java Is Interpreted**
- ◆ Java Is Robust
- ◆ Java Is Secure
- ◆ Java Is Architecture-Neutral
- ◆ Java Is Portable
- ◆ Java Is Multithreaded
- ◆ Java Is Dynamic

You need an interpreter to run Java programs. The programs are compiled into the Java Virtual Machine code called bytecode. The bytecode is machine-independent and can run on any machine that has a Java interpreter, which is part of the Java Virtual Machine (JVM).

Java source code is translated to a byte code that is interpreted one instruction at a time by the Java Virtual Machine.

# Characteristics of Java

- ◆ Java Is Simple
- ◆ Java Is Object-Oriented
- ◆ Java Is Distributed
- ◆ Java Is Interpreted
- ◆ **Java Is Robust**
- ◆ Java Is Secure
- ◆ Java Is Architecture-Neutral
- ◆ Java Is Portable
- ◆ Java Is Multithreaded
- ◆ Java Is Dynamic

Java compilers can detect many problems that would first show up at execution time in other languages.

Java has eliminated certain types of error-prone programming constructs found in other languages.

Java has a runtime exception-handling feature to provide programming support for robustness.

The design of the Java platform ensures that the programs run correctly and do not break when the unexpected happens.

# Characteristics of Java

- ♦ Java Is Simple
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ **Java Is Secure**
- ♦ Java Is Architecture-Neutral
- ♦ Java Is Portable
- ♦ Java Is Multithreaded
- ♦ Java Is Dynamic

Java implements several security mechanisms to protect your system against harm caused by stray programs.

Java programs can be downloaded from a location on the network. Such downloaded Java programs cannot access files or destroy programs on your computer.

# Characteristics of Java

- ♦ Java Is Simple
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ Java Is Secure
- ♦ **Java Is Architecture-Neutral**
- ♦ Java Is Portable
- ♦ Java Is Multithreaded
- ♦ Java Is Dynamic

Java language programs can be written on one machine and run on a machine with a different type of CPU.

Write once, run anywhere

With a Java Virtual Machine (JVM),  
you can write one program that will  
run on any platform.

# Characteristics of Java

- ♦ Java Is Simple
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ Java Is Secure
- ♦ Java Is Architecture-Neutral
- ♦ **Java Is Portable**
- ♦ Java Is Multithreaded
- ♦ Java Is Dynamic

Because Java is architecture neutral, Java programs are portable. They can be run on any platform without being recompiled.

# Characteristics of Java

- ♦ Java Is Simple
- ♦ Java Is Object-Oriented
- ♦ Java Is Distributed
- ♦ Java Is Interpreted
- ♦ Java Is Robust
- ♦ Java Is Secure
- ♦ Java Is Architecture Neutral
- ♦ Java Is Portable
- ♦ **Java Is Multithreaded**
- ♦ Java Is Dynamic

Multithreading is when multiple Java programs are running simultaneously and sharing data and instructions. Multithreading provides the user the ability to view an animation or video clip, listen to music in a browser, and search for information on the World Wide Web.

Multithread programming is smoothly integrated in Java, whereas in other languages you have to call procedures specific to the operating system to enable multithreading.

# Characteristics of Java

- ◆ Java Is Simple
- ◆ Java Is Object-Oriented
- ◆ Java Is Distributed
- ◆ Java Is Interpreted
- ◆ Java Is Robust
- ◆ Java Is Secure
- ◆ Java Is Architecture-Neutral
- ◆ Java Is Portable
- ◆ Java Is Multithreaded
- ◆ **Java Is Dynamic**

Dynamic has several meanings as it applies to the Java language. For example, the language has special capabilities that allow the program to call upon resources as needed dynamically when the program is running in memory. Such a resource can be another Java routine. The software development process can also be dynamic. Java allows a programmer to approach a solution to a problem in incremental steps. At each step of the solution, a small number of routines can be built with newer routines using the work of already defined routines. This encourages reuse of code.

Java was designed to adapt to an evolving environment. New code can be loaded on the fly without recompilation. There is no need for developers to create, and for users to install, major new software versions. New features can be incorporated transparently as needed.

# JDK Versions

- ✦ JDK 1.02 (1995)
- ✦ JDK 1.1 (1996)
- ✦ JDK 1.2 (1998)
- ✦ JDK 1.3 (2000)
- ✦ JDK 1.4 (2002)
- ✦ JDK 1.5 (2004) or Java 5
- ✦ JDK 1.6 (2006) or Java 6
- ✦ JDK 1.7 (2011) or Java 7
- ✦ JDK 1.8 (2014) or Java 8
- ✦ Java 9 (2017)
- ✦ Java 10 (2018)
- ✦ Java 11(18.9 LTS) (2018)

# JDK Editions

- ♦ Java Standard Edition (Java SE)
  - can be used to develop client-side standalone applications or applets.
  - This class uses J2SE to introduce Java programming.
- ♦ Java Enterprise Edition (Java EE)
  - can be used to develop server-side applications such as Java servlets, Java Server Pages, and Java ServerFaces.
- ♦ Java Micro Edition (Java ME).
  - can be used to develop applications for mobile devices such as cell phones.
  - Java SDK for Android is not Java ME

# Java API

## Application Programming Interface

- ♦1) Java Core API
- ♦2) Java Standard Extension API (javax)
- ♦3) Provided by Vendors or Organizations (3<sup>rd</sup> parties)

# Editors and Popular Java IDEs

## ◆ Common Text Editors

- Notepad
- TextEdit
- Editplus
- UltraEdit

## ◆ IDE (Integrated Development Environment)

- Eclipse <http://www.eclipse.org/> recommended
- IntelliJ IDEA recommended (IDEA 校园版 <https://www.jetbrains.com/buy/classroom/?fromMenu>)
- NetBeans

# A Simple Java Program

## Listing 1.1

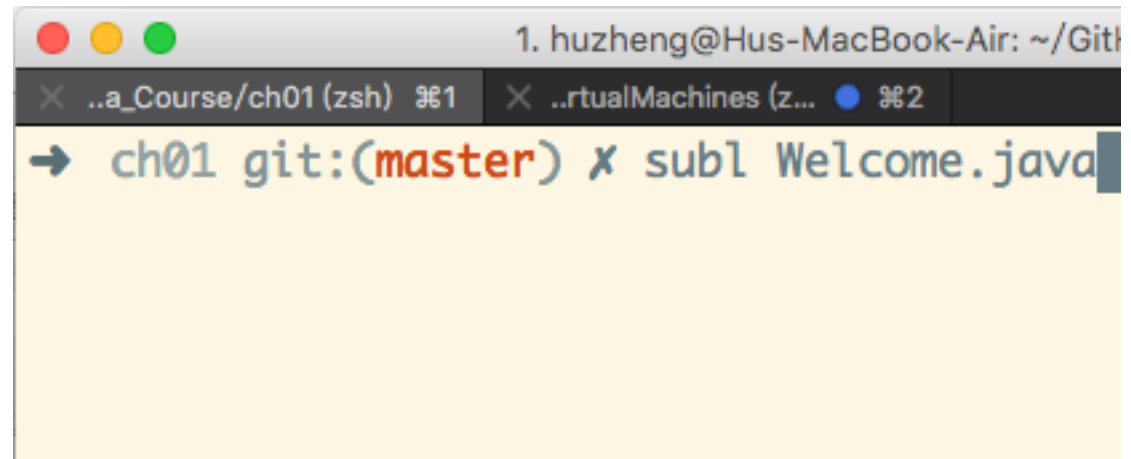

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

Animation

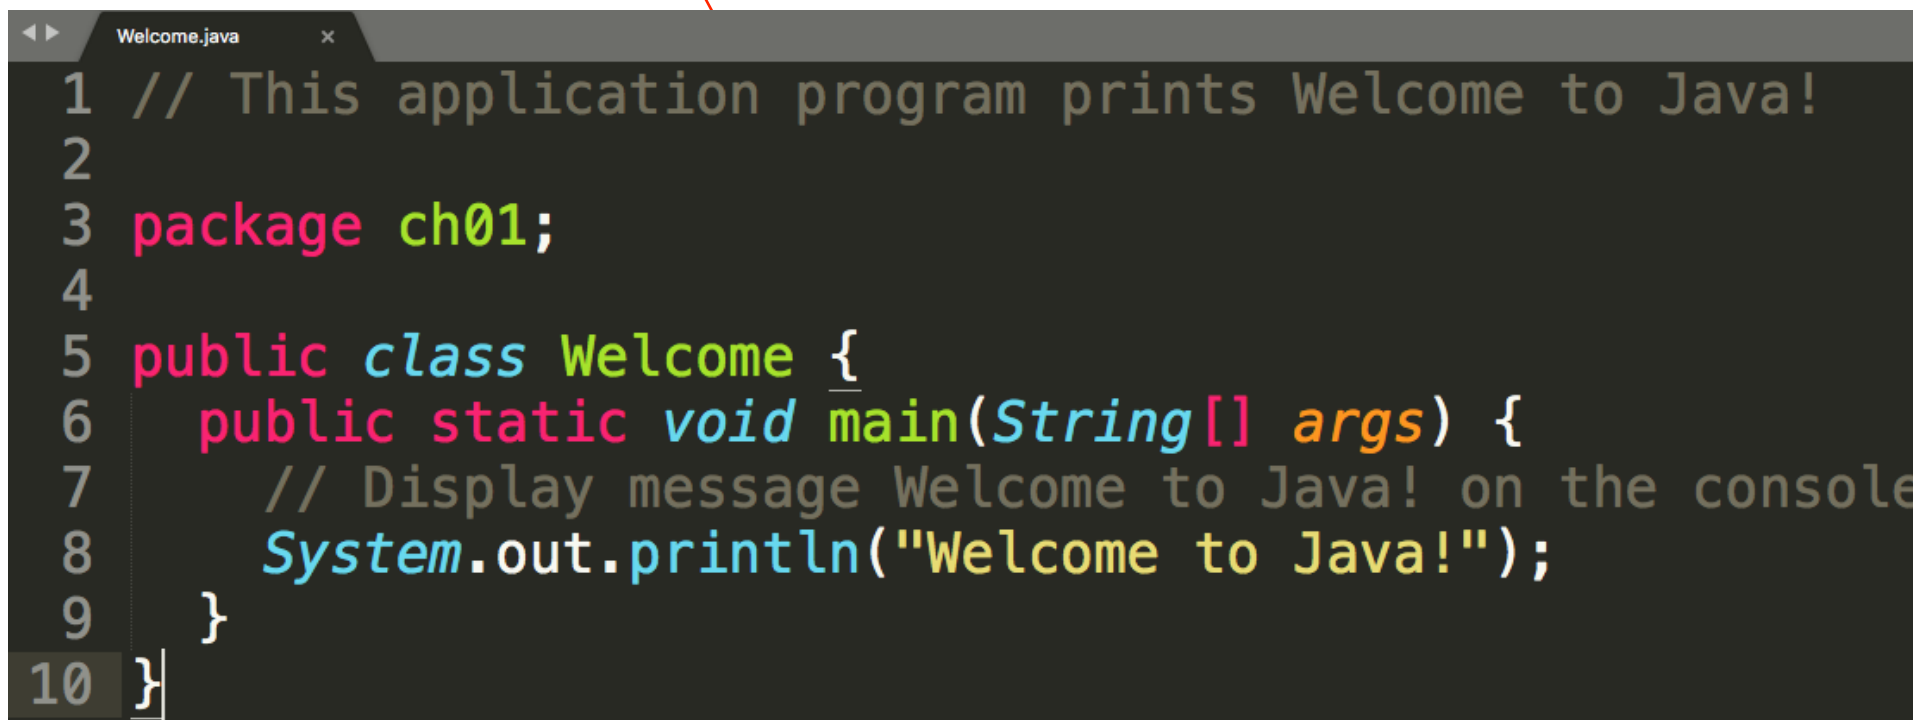

# Creating and Editing Using NotePad

To use text editor for  
Welcome.java  
from the Command  
Window.

A terminal window on a Mac. The title bar shows the user '1. huzheng@Hus-MacBook-Air' and the path '~/Git'. There are two tabs: '..a\_Course/ch01 (zsh) %1' and '..rtualMachines (z... %2'. The command prompt shows 'ch01 git:(master) x subl Welcome.java'.

```
1. huzheng@Hus-MacBook-Air: ~/Git
..a_Course/ch01 (zsh) %1
..rtualMachines (z... %2
ch01 git:(master) x subl Welcome.java
```

A screenshot of a text editor window titled 'Welcome.java'. The code is as follows:

```
1 // This application program prints Welcome to Java!
2
3 package ch01;
4
5 public class Welcome {
6     public static void main(String[] args) {
7         // Display message Welcome to Java! on the console
8         System.out.println("Welcome to Java!");
9     }
10 }
```

```

1 // This application program prints Welcome to Java!
2
3 package ch01;
4
5 public class Welcome {
6     public static void main(String[] args) {
7         // Display message Welcome to Java! on the console
8         System.out.println("Welcome to Java!");
9     }
10 }

```

**Source code (developed by the programmer)**

```

public class Welcome {
    public static void main(String[] args) {
        System.out.println("Welcome to Java!");
    }
}

```

**Bytecode (generated by the compiler for JVM to read and interpret)**

```

...
Method Welcome()
  0 aload_0
  ...

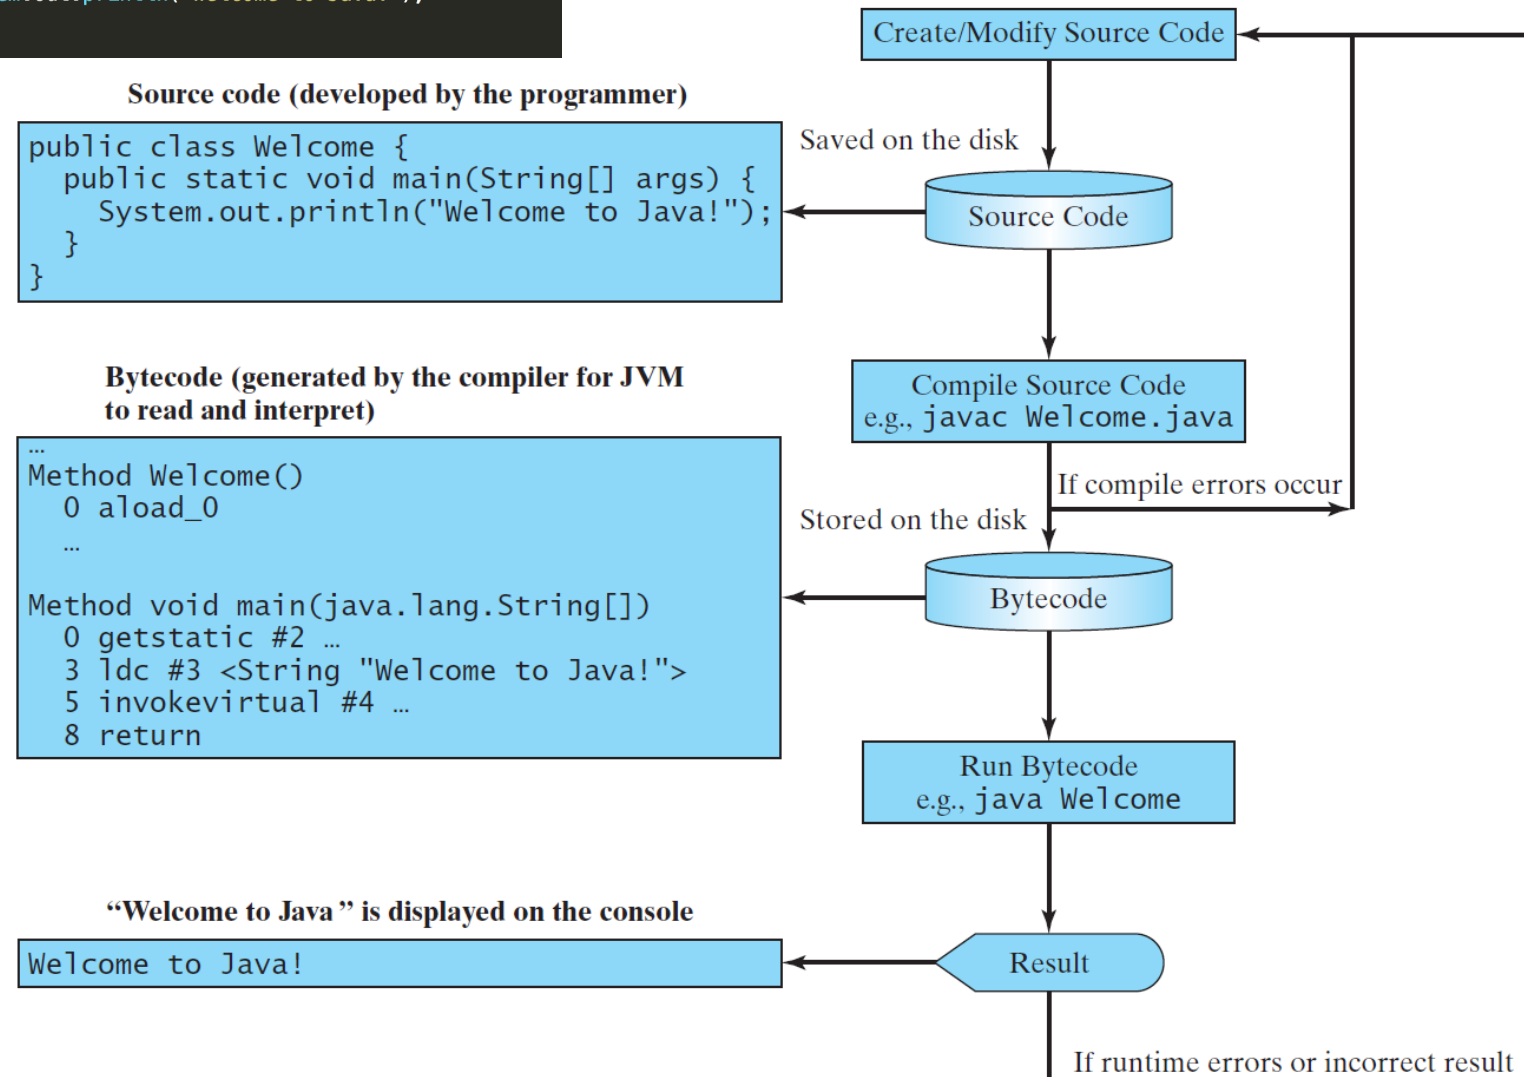

Method void main(java.lang.String[])
  0 getstatic #2 ...
  3 ldc #3 <String "Welcome to Java!">
  5 invokevirtual #4 ...
  8 return

```

**“Welcome to Java” is displayed on the console**

Welcome to Java!

# Creating, Compiling, and Running Programs

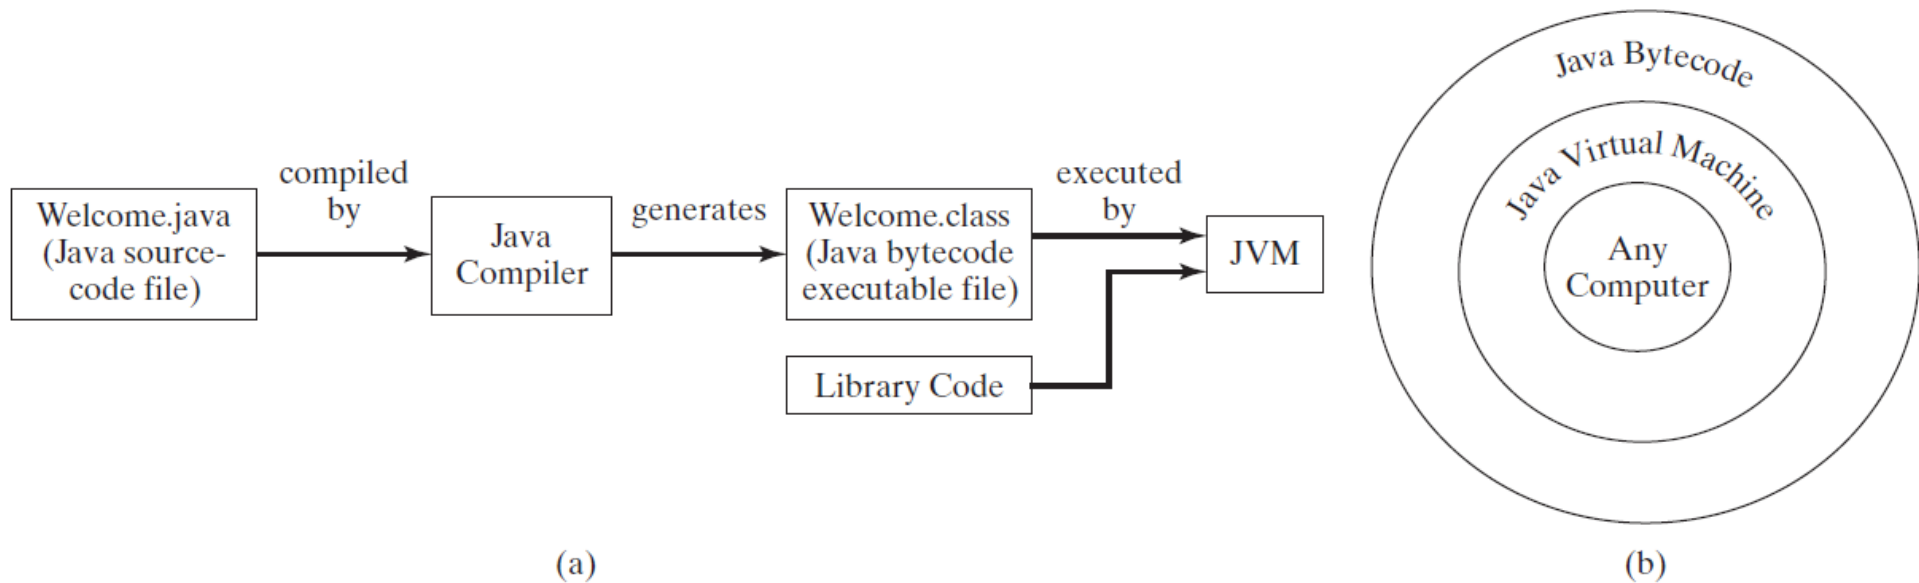

# Compiling Java Source Code

Write the program once, and compile the source program into a special type of object code, known as *bytecode*.

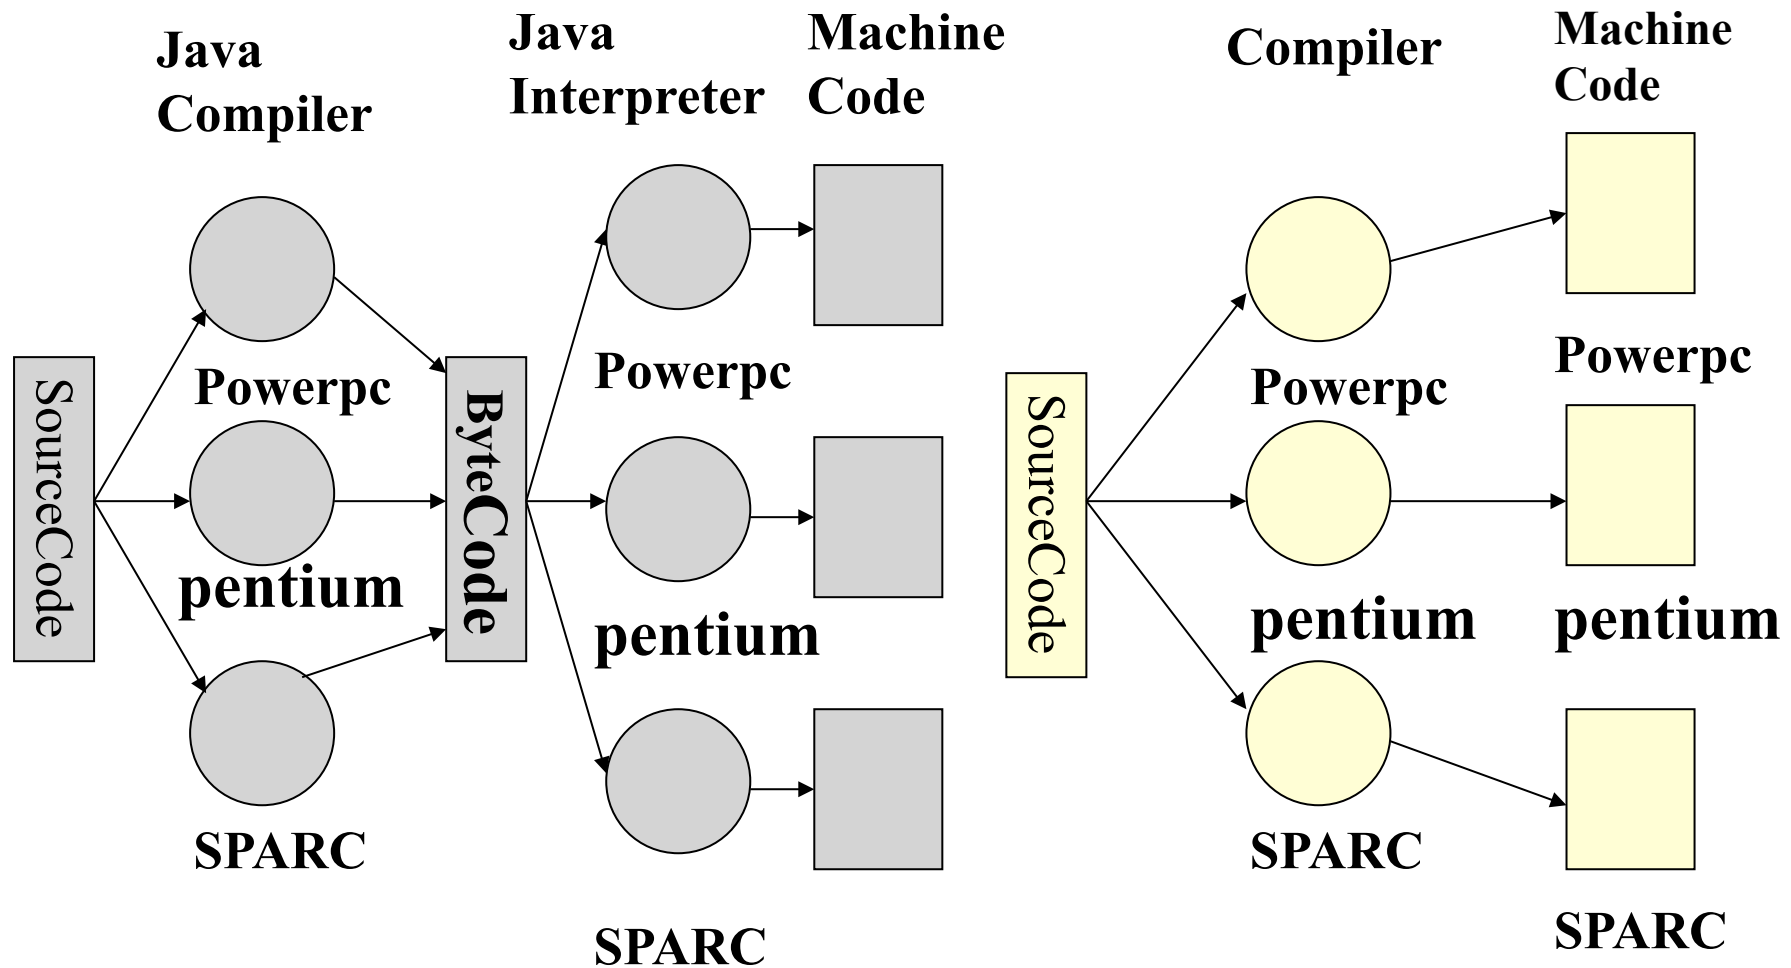

The bytecode can then run on any computer with a Java Virtual Machine.

Java Virtual Machine is a software that interprets Java bytecode.

# Neutral/Platform Independent

# Trace a Program Execution

Enter main method

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Trace a Program Execution

Execute statement

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Trace a Program Execution

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

print a message to the  
console

```
➔ ch01 git:(master) x subl Welcome.java  
➔ ch01 git:(master) x javac Welcome.java  
➔ ch01 git:(master) x ls -l Welcome.*  
-rw-r--r--  1 huzheng  staff  429 10  7 05:26 Welcome.class  
-rwxr-xr-x  1 huzheng  staff  251 10  7 05:13 Welcome.java  
➔ ch01 git:(master) x java -cp .. ch01.Welcome  
Welcome to Java!
```

# One More Simple Example

WelcomeWithThreeMessages

# Anatomy of a Java Program

- ♦ Class name
- ♦ Main method
- ♦ Statements
- ♦ Statement terminator
- ♦ Reserved words
- ♦ Comments
- ♦ Blocks

# Class Name

Every Java program must have at least one class.

Each class has a name.

By convention, class names start with an uppercase letter.

```
// This program prints Welcome to Java!
public class Welcome {
    public static void main(String[] args) {
        System.out.println("Welcome to Java!");
    }
}
```

# Main Method

Line 2 defines the main method. In order to run a class, the class must contain a method named main. The program is executed from the main method.

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Statement

A statement represents an action or a sequence of actions.

*System.out.println("Welcome to Java!")*

is to display the greeting "Welcome to Java!".

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Statement Terminator

Every statement in Java ends with a semicolon (;).

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Reserved words

Reserved words or keywords are words that have a specific meaning to the compiler and cannot be used for other purposes in the program.

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

# Blocks

A pair of braces in a program forms a block that groups lexons of a program.

```
public class Test {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

Class block

Method block

# Special Symbols

Character Name	Description	
{ }	Opening and closing braces	Denotes a block to enclose statements.
( )	Opening and closing parentheses	Used with methods.
[ ]	Opening and closing brackets	Denotes an array.
//	Double slashes	Precedes a comment line.
" "	Opening and closing quotation marks	Enclosing a string (i.e., sequence of characters).
;	Semicolon	Marks the end of a statement.

{ ... }

```
// This program prints Welcome to Java!
public class Welcome {
    public static void main(String[] args) {
        System.out.println("Welcome to Java!");
    }
}
```

( ... )

```
// This program prints Welcome to Java!
public class Welcome {
    public static void main(String[] args) {
        System.out.println("Welcome to Java!");
    }
}
```

•  
;

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

// ...

```
// This program prints Welcome to Java!  
public class Welcome {  
    public static void main(String[] args) {  
        System.out.println("Welcome to Java!");  
    }  
}
```

'' ... ''

```
// This program prints Welcome to Java!
public class Welcome {
    public static void main(String[] args) {
        System.out.println("Welcome to Java!");
    }
}
```

# Source Code Structure

- Zero or up to one Package Statement
- Zero or multiple Import Statements
- Zero or multiple Class Declaration
- Zero or multiple Interface Declaration
- Only one Public Class or Interface
- Java source code file name must be as same as the public class name
- Up to one package declaration. The first line of java file
- Import class as specific as possible
  - `import com.abc.dollapp.main.*;`
  - Better: `import com.abc.dollapp.main.AppMain;`

# Programming Style and Documentation

- ◆ Appropriate Comments
- ◆ Naming Conventions
- ◆ Proper Indentation and Spacing Lines
- ◆ Block Styles

# Appropriate Comments

Include a summary at the beginning of the program to explain what the program does, its key features, its supporting data structures, and any unique techniques it uses.

Include your name, class section, instructor, date, and a brief description at the beginning of the program.

**FileResource.java**

# Naming Conventions

- ♦ Choose meaningful and descriptive names.
- ♦ Class names:
  - Capitalize the first letter of each word in the name. For example, the class name  
`ComputeExpression`  
`CalculatorApp`

# Proper Indentation and Spacing

## ♦ Indentation

- Indent two spaces.

## ♦ Spacing

- Use blank line to separate segments of the code.

# Block Styles

Use end-of-line style for braces.

*Next-line  
style*

```
public class Test
{
    public static void main(String[] args)
    {
        System.out.println("Block Styles");
    }
}
```

*End-of-line  
style*

```
public class Test {
    public static void main(String[] args) {
        System.out.println("Block Styles");
    }
}
```

# Programming Errors

- ◆ Syntax Errors
  - Detected by the compiler
- ◆ Runtime Errors
  - Causes the program to abort
- ◆ Logic Errors
  - Produces incorrect result

# Syntax Errors

```
public class ShowSyntaxErrors {  
    public static main(String[] args) {  
        System.out.println("Welcome to Java);  
    }  
}
```

ShowSyntaxErrors

# Runtime Errors

```
public class ShowRuntimeErrors {  
    public static void main(String[] args) {  
        System.out.println(1 / 0);  
    }  
}
```

ShowRuntimeErrors

# Logic Errors

```
public class ShowLogicErrors {  
    public static void main(String[] args) {  
        System.out.println("Celsius 35 is Fahrenheit degree ");  
        System.out.println((5 / 9) * 35 + 32);  
    }  
}
```

ShowLogicErrors

# A bigger Example \*

```
public class ShowLogicErrors {  
    public static void main(String[] args) {  
        System.out.println("Celsius 35 is Fahrenheit degree ");  
        System.out.println((9 / 5) * 35 + 32);  
    }  
}
```

# Exercise 01

1.1 包的使用：示例**DroidApp**。拷贝./ch01/huz/目录，构建带子目录的文件夹，了解其包含的子目录结构，并尝试用命令行方式进行带包编译和带包执行，从而掌握目录、包、**classpath**等概念的关系。

1.2 2\*2线性方程组求解可以使用**Cramer**规则

$$\begin{array}{l} ax + by = e \\ cx + dy = f \end{array} \quad x = \frac{ed - bf}{ad - bc} \quad y = \frac{af - ec}{ad - bc}$$

编写程序，求解一下方程组并显示**x**和**y**的值。

$$3.4x + 50.2y = 44.5$$

$$2.1x + 0.55y = 5.9$$

**Submission Deadline: the Next Monday(10/15/2018  
9:00am(class03) or 11:10am(class04) )**

# Exercise 01

## 1.3 财务应用：计算未来投资值

编写程序，读取投资总额、年利率和年数，然后使用下面的公式来显示未来投资金额：

未来投资金额=投资总额× (1+月利率)<sup>年数×12</sup>

例如：如果输入的投资金额为1000，年利率为3.25%，年数为1，那么未来投资额为1032.98。

## 1.4 求出年数

编写程序，提示用户输入分钟数（例如十亿），然后显示这些分钟代表多少年和多少天。

为了简化问题，假设一年有365天。

## 1.5 选做题，完

善[https://github.com/huzhengatUCSD/Java\\_Course/blob/master/ch02/Calculator.java](https://github.com/huzhengatUCSD/Java_Course/blob/master/ch02/Calculator.java)的

未写好的方法，并试着编写一个

TestCalculator类，运用Calculator的方法完成对应运算功能。
